

# Straightedge

^ cut along this line ^

^ cut along this line ^

Place tape over the dots, then use a sharp object to poke small holes where each dot is.

Mr. Fruzzetti's Geometry Class - print this page, then cut out your tools for use in Geometric constructions.

## USAGE NOTES:

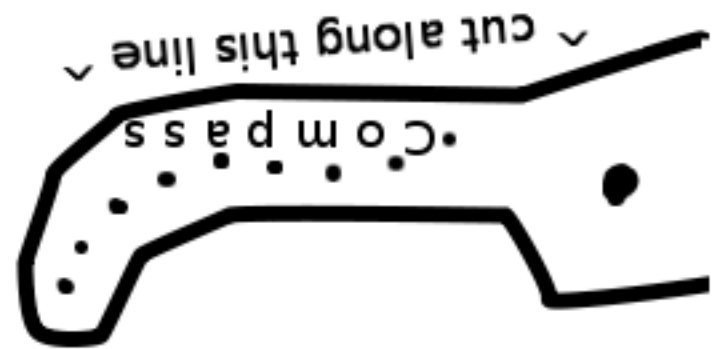

- (1) Use the clean paper edge for your straightedge, NOT the edge you cut.
- (2) The smaller the holes you poke in the compass, the better it will work.
- (3) The compass tool requires you to use two pens - one as the 'point' and the other as the 'tip.'

Geometric constructions.
